FOR IMMEDIATE RELEASE

Dr. John L. Wailes, associate professor of pharmacy at Montana State University, has received \$2,990 from the U. S. Public Health Service to continue research that may speed up the manufacture of drugs, according to Dean Robert L. Van Horne of the School of Pharmacy.

Dr. Wailes began his study of "Preservatives and Antagonists on Mold Respiration" in 1959 under a three-year grant from the USPHS National Institutes of Health, the dean said.

The MSU pharmacist is working on a method of testing preservatives in pharmaceutical products that would save time in the manufacturing process. He is also trying to identify antagonistic substances and find a way to overcome these antagonists.
